

# Product Technical Overview

## Wands

For SAP 5

### Minimum Technical Requirements

**OS:** Windows 7 or higher  
**Excel:** 2010–2019 (incl 64 bit), Office 365 desktop  
**S/4HANA:** All versions or,  
**ECC:** SAP\_BASIS 700 SP0014 (GL Wand), SAP\_BASIS 750 (Reports Wand)

### Security

Wands are tightly integrated with SAP and leverage all of the built in SAP security.

- Users will already be logged on and authenticated to SAP before they can access the application.
- Single sign on is supported.
- A user can only report off objects such as company codes or cost centers that they have access to in SAP.
- When reporting off General Ledger data, GL Wand will impose the same accounting security rules as SAP.
- When reporting off the secured tables and views in SAP, the Wands applications will impose the same limitations on the data returned as SAP does. This applies to GL Wand drill down reports to the document level as well as running CDS views in Reports wand.

### Architecture

 Launch from SAP Transaction

 Access Wands via the SAP user's existing authorizations

 Application components deployed automatically including Excel Add-In

 Report refresh via RFC read only connection.

### Install Components

The Wands server component consists of a transport that is imported into your SAP system. The transport includes the server functions used to retrieve balances, drill down on functions, execute CDS views and post plan values.

### Certifications:

SAP® Certified  
Powered by SAP NetWeaver®
